

Dylan Fisher, PHP Developer

Highly motivated PHP developer with 4 years of experience, seeking new opportunities to create software. I would like to expand my knowledge and take on new challenges.

Employment History

Lead Software Engineer at Psittacus Ltd, Rothwell

March 2023 — April 2024

As of January 2023, I was promoted to the Lead Software Engineer role. During this time I was now responsible for maintaining and leading all development across the company's expansive portfolio of systems and websites.

Within this new role, I changed how development was handled throughout the company and ensured high standards were met when working on projects. I introduced the company to GIT and created a development cycle using the Agile methodology. With this in place, I oversaw all aspects of development and ensured that all code was clean and well-documented.

Throughout my time in this role, I also took over the duties of maintaining our servers. This allowed me to gain knowledge in server administration and the basics of networking to ensure our software and websites could run smoothly.

Software Engineer at Psittacus Ltd, Rothwell

September 2020 — March 2023

As a software engineer at Psittacus, I was responsible for designing, creating and maintaining websites and systems across the company's portfolio.

During my employment, I developed within the company's preferred tech stack: PHP (Laravel), MySQL, Bootstrap, jQuery, Apache and Nginx.

I worked in a small team of 3 engineers but often worked by myself while working on certain systems. My biggest achievement in this role was creating a bespoke system for The CPD Group, a sister company of Psittacus.

While working on this project, I created a full customer relationship management system for staff and a customer portal that allowed clients to log in and manage their records. This project contained multiple form applications, certificate management and downloading, support ticket systems and a portal resources system where clients could download documents and guides.

I also occasionally worked with other engineers on client websites the company was contracted to work on to expand its portfolio.

Skills

PHP

Laravel

HTML

JavaScript

MySql

CSS

MVC

GIT

Education

Level 2 Computing Diploma, South Devon College, Paignton

September 2016 — June 2017

Fresh out of school I took on a Level 2 Computing Diploma while learning how to create websites in my free time. I graduated with a Distinction grade.

Paignton Academy

- Mathematics GCSE (C)
- English Language GCSE (C)
- Computing - Distinction *
